# Mathematics and Mechanics of Solids

The mechanical behavior of solids is a fundamental discipline in modern engineering and applied science. The field continues to grow, driven by increasingly elaborate technological applications of natural and engineered solid materials. While classical continuum theories of solids (e.g., elasticity, plasticity, viscoelasticity) have firm mathematical foundations, modern applications demand ever more sophisticated analysis.

**Mathematics and Mechanics of Solids** will foster innovative research in solid mechanics and materials science. The central aim of MMS is to publish original, well-written and self-contained research that elucidates the mechanical behavior of solids with particular emphasis on mathematical principles. From time to time, the editors may invite an eminent person to write an essay article on a topic of current interest.

## Abstracted/Indexed in:

Academic Search; Applied Mechanics Reviews; CompuMath Citation Index; Corporate Resource Net; Current Citations Express; Current Contents Engineering; Computing & Technology; Engineered Materials Abstracts; INSPEC; International Aerospace Abstracts, Materials Science Citation Index; Mathematical Reviews Database; METADEX; Science Citation Index Expanded

## Contents Alerting Service

Register now for our Content Alerting Service. You will automatically be emailed the table of contents before the publication of each issue.

Further details on our website [www.sagepub.co.uk](http://www.sagepub.co.uk)

## Now Available Electronically

**Mathematics and Mechanics of Solids** is available electronically to institutional subscribers through the following intermediaries.

Ingenta • EBSCOhost • Electronic Journals Service • SwetsWise • OCLC • FirstSearch  
ECO • Minerva

An institutional subscription includes:

- Print Subscription
- Permanent electronic access to volume subscribed
- Access rights to electronic back volumes as long as subscription is maintained
- The right to copy articles for coursepacks without prior permission

## Manuscript Submission

The Editorial Board invites submission of papers to **Mathematics and Mechanics of Solids**. Full submission guidelines can be found on the journal web page at [www.sagepub.co.uk](http://www.sagepub.co.uk).

Six times a year: February, April, June, August, October, December

ISSN: 1081-2865

# Highlights for 2003

---

## Volume 8 Issue 4

On Saint-Venant's Principle for a Curvilinear Rectangle in Linear Elastostatics **J N Flavin and B Gleeson**

On the Role of Inhomogeneities in the Deformation of Elastic Bodies **U Saravanan and K R Rajagopal**

Volumetric Growth of Thermoelastic Materials and Mixtures **Stephen M Klisch and Anne Hoger**

Non-Local Models of Stress Field Concentrations and Effective Thermoelastic Properties of Random Structure Composites **V A Buryachenko and N J Pagano**

The Mullins Effect in the Vibration of a Stretched Rubber Membrane **Millard Beatty**

## Volume 8 Issue 3

Small Oscillations and Stability of a Thick Highly Elastic Slab **S A Usmani**

On the Elliptic Balance Method **Alex Elias-Zúniga**

Mechano-electrical Phenomena in Ionic Polymers **Moshen Shahinpoor**

The Graves Condition for Incompressible Finite Elasticity **G P Mac Sithigh**

A Pressurized Spherical Elastomeric Membrane Undergoing Temperature Induced Scission and Crosslinking **Kristin Myers and Alan Wineman**

Analysis of the Air-damping Effect on a Micromachined Beam Resonator **Chuanli Zhang, Guanshui Xu and Qing Jiang**

Fracture Criteria for Pre-stressed and Pre-polarized Piezoelectric Crystals **Eveline Baesu and Eugen Soós**

## Volume 8 Issue 2

Theoretical Backgrounds of Durability Analysis by Normalized Equivalent Stress Functionals **S E Mikhailov**

Uniqueness of the Displacement Field in Classical Linear Elastostatics **David J Steigmann and Lewis T Wheeler**

On the Solution of Mixed Problems in Anti-plane Micropolar Elasticity **S Potapenko, P Schiavone and A Mioduchowski**

On the Design of Neutral Elastic Inhomogeneities in the Case of Non-Uniform Loading **D Van Vliet, P Schiavone and A Mioduchowski**

Interaction between a Screw Dislocation and a Three-Phase Circular Inhomogeneity with Imperfect Interface **L J Sudak**

Cosserat Models versus Crack Propagation **Mihail Garajeu and Eugen Soós**

## Volume 8 Issue 1

On the Existence and Uniqueness of the Generalized Solution of Reissner's Elastica **R Flajs, M Saje and E Zakrajsek**

Some Exact Mathematical Solutions for Granular Stock Piles and Granular Flow in Hoppers **Grant M Cox and James M Hill**

Truss Modular Beams with Deformation Energy depending on Higher Displacement Gradients **Jean-Jacques Alibert, Pierre Seppecher and Francesco Dell'Isola**

The Critical Role of the Base Curve for the Qualitative Behavior of Shearable Rods **Stuart S Antman and Friedemann Schuricht**
